

### 2015.2.0.5202 2016-05-31

---

#### Error rectification

- ATHENA objects got corrupt after inserting via clipboard. That does not happen anymore.
- It is now possible to edit levels that have been inserted via clipboard.
- Saving folding tables froze ATHENA/AutoCAD. This is solved.

#### Improvements

- Execution on AutoCAD / Architecture / Mechanical 2017 enabled.
- French documentation (as PDF and offline help on the ATHENA-CD) has been complemented.

### 2015.1.0.3794 2015-10-23

---

#### Error rectification

- The transfer of LogiKal profile combination into „Bar assembly manager“ works now correctly.

#### Improvements

- English documentation (as PDF and offline help on the ATHENA-CD) has been complemented.

### 2015.1.0.3752 2015-08-07

---

#### Error rectification

- In the project manager, multiple jobs from another drawing could not be imported. Now the import of multiple jobs is performed correctly.
- Creating a sealing by object selection of the object has frequent errors. This error has been fixed.
- In the semi-finished product dialog box width dimensions or diameter less than 1 were not possible. A smaller value than 1 is now possible. That is important when you work with imperial units.
- The preview of infills dialog “multiple” was wrong. This error has been fixed.
- The preview of the dialog bar division was wrong. This error in the presentation of the preview has been fixed.
- With the command “visualize axis model” the display was incorrect. That happened occasionally when the weather side was reversed. This error has been fixed.
- The units (inches and decimal) were displayed incorrectly in the Drilled Hole dialog box. This has been fixed.
- The dialog box Positions was closed with a cancel message at the first execution. This problem is solved.
- A unit should not appear when labelling a thread. Only if the label contains the depth or width of the thread. This has been fixed.
- An incorrect function of sheet development. An incorrect angle was displayed at rolled edges. This bug was solved.

- A system error on standard parts. It crashed if rivet was edited with the grip. This error has been fixed.
- Now views of inserted drills can be modify by editing them.
- Various small error corrections have been carried out.

### Improvements

- English, French, Spanish, Italian, Dutch and Chinese translation has been complemented.
